

An aerial photograph of a vast orchard, likely citrus, with rows of trees stretching towards the horizon. The scene is bathed in the warm, golden light of a setting or rising sun, creating long shadows and a hazy atmosphere. A dirt road winds through the orchard, and a large truck is visible on it in the lower right quadrant.

We are reducing
food waste worldwide...
and we will continue
to rise to the challenge.

AgroFresh

We Grow Confidence™

The Sustainability Impact of SmartFresh™ data-backed and third party verified.

Reducing post-harvest losses of already produced food is more sustainable than increasing production to compensate for these losses.

At AgroFresh, how we operate as a responsible corporate citizen is equally as important as *what* we deliver in solutions to our customers.

You may know AgroFresh as the guardian of the world's produce. But you can also consider us guardians of the world's future. Our sustainability commitment comes from 40 years of delivering innovative products, services and digital solutions to better protect and preserve the planet through prolonged produce freshness, reduced food waste, and significantly less food loss.

Our dedication to protect and preserve the planet has never wavered. More importantly, our philosophy is grounded in results that make a greater sustainable impact.

We've highlighted some of our programs, policies and solutions that are contributing to a more sustainable world in our inaugural Environment, Social and Governance (ESG) report. AgroFresh is committed to continuously strengthening our environmental and social performance, further reducing our greenhouse gas emissions (GHGs) and ensuring better inclusivity, equality and equity.

Ensuring the health of our planet and the food we grow has never been a more serious or urgent charge. At AgroFresh, we lead this charge through a proactive approach to sustainability that is ingrained in our every action, every day. SmartFresh™, our groundbreaking ethylene management solution, is one great example of our measurable impact on the reduction of food waste. But there's more to be done; the accomplishments and standards of our past and present do not represent the end of our obligations to sustainability.

We will work tirelessly to deliver solutions that improve produce quality, help to reduce food waste and further advance sustainability for our customers, our community, and the planet. We look forward to providing updates on our progress in achieving these commitments.
